EDUCATION

Rochester Institute of Technology

Expected: May 2026

Degree: A.A.S., Major: Applied Computer Technology, Concentration: Networking & Cybersecurity

Rochester, NY

- **GPA: 3.69/4.0;** Dean's List (5 Consecutive Semesters), Epsilon Pi Tau (Technology Honor Society)

WORK EXPERIENCE

Rochester Institute of Technology

Feb. 2025 – May 2025

Networking and Cybersecurity Tutor

Rochester, NY

- Mentored students in networking and cybersecurity fundamentals including Cisco IOS configuration, VLAN segmentation, and VPN setup, as part of a university IT curriculum.
- Supported more than 25 students during a semester, delivering both one-on-one and group tutoring sessions in networking and cybersecurity concepts as part of a formal university program.
- Guided students through complex lab troubleshooting, including DNS resolution failures, DHCP lease issues, VLAN misconfigurations, and connectivity problems on Cisco switches and routers.
- Specialized in helping students master challenging topics such as subnetting, IP address calculations, and network segmentation for various IP classes.
- Instructed peers on the use of Wireshark for packet analysis and Nmap for network discovery to strengthen defensive security skills.

PROJECTS

Comprehensive Network Setup & Configuration

- Designed, configured, and maintained an enterprise-grade network with 200+ subnets using Cisco 2960 switches, 4321 routers, Aruba wireless APs, and VMware ESXi. Provisioned 7 VMs (Windows Server, Linux, Active Directory) and implemented VLANs, NAT, DHCP, and DNS for cross-departmental connectivity.
- Configured and maintained physical and virtual infrastructure using Hyper-V and VMware ESXi to simulate enterprise-scale virtualization and service hosting with IIS and Apache2 web servers.

Network Protocol Research (IS-IS & BGP)

- Analyzed IS-IS and BGP routing protocol architecture, focusing on security vulnerabilities and resilience mechanisms within service provider and enterprise backbone environments.
- Authored a technical paper and delivered a professional presentation on protocol-specific attack vectors and route filtering strategies.

Enterprise Infrastructure Home Lab | [GitHub](#)

- Configured Windows Server 2025 domain environment with Active Directory, DNS, DHCP, and Group Policy
- Deployed containerized monitoring and security stack (Grafana, Prometheus, Wazuh) on Rocky Linux using Docker and Ansible

CERTIFICATIONS, TECHNICAL SKILLS & INTERESTS

- **Certifications & Training:** Microsoft PowerShell Series (Microsoft AI Skills); Cisco Networking Academy Introduction to Packet Tracer
- **Technologies:** Windows Server; Linux; Docker; Proxmox; Grafana; Prometheus; Wazuh; ServiceNow; Active Directory; VMware ESXi; Hyper-V; TCP/IP; DNS; DHCP; Cisco CLI; Wireshark; Nmap; PowerShell; Bash; Git; Microsoft 365; Python; Ansible; GitHub Actions; Terraform; Rocky Linux; Docker Compose
- **Skills:** System Administration; IT Support; Troubleshooting; User Account Management; System Monitoring; Backup & Recovery; Scripting; Firewall Auditing; Network Security; Hardware Troubleshooting; CI/CD; Infrastructure as Code; Configuration Management; Containerization; Vulnerability Management; SIEM; Log Analysis; Documentation
